

Course Name

Security Awareness Online

Course Overview

The Security Awareness or HEAT course has been based on the learning modules run by the European Commission, United Nations and major NGOs and commercial organisations working in insecure and hostile environments. These modules have been tried and tested and have been proven to increase the security awareness of staff who have undergone them.

The ISAB Security Awareness course uses real world scenarios designed by personnel with first hand experience of managing security projects in regions such as Africa, Central Asia, South America and the Middle East. This experience and knowledge allows our team of instructors to deliver quality training based on sound security principles

Course Objectives

Who Should Attend

Course Duration

4 days

Course Outline

- The course has 17 units that cover general security, personal security, responses to incidents and personal development skills. The course uses classroom based lectures, group discussions, scenario based assessments and activities to develop the skills and knowledge required for working in insecure environments.
